

MESH OPTIONS

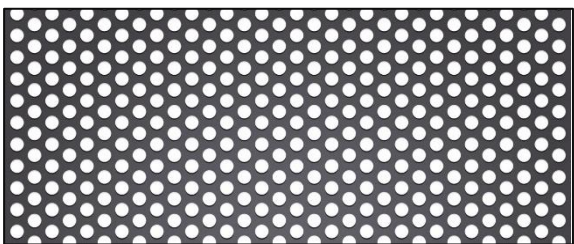

Aluminium or Fibreglass mesh – these finely woven products are a great budget-friendly solution for keeping insects out of your home

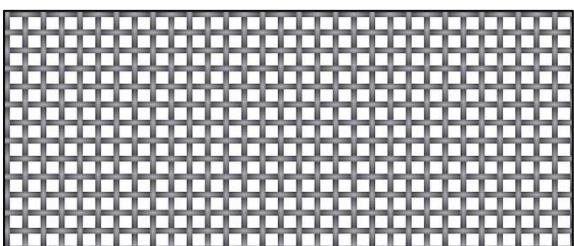

Petmesh – this is a soft, flexible mesh that resists tearing and cutting. It is a great option where pets and children will make contact with the mesh.

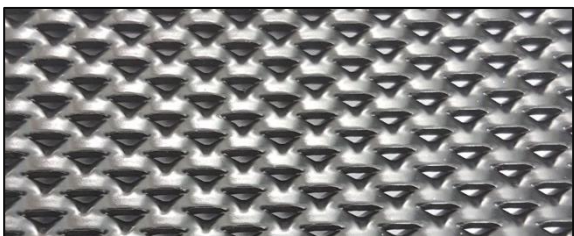

Midgie mesh – this is an ultra-fine mesh for blocking midgies from your home, but it is very fragile and works best when combined with another mesh (especially in door applications)

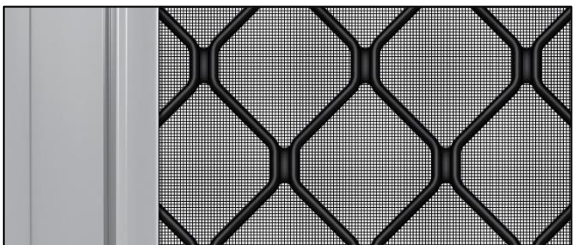

Alugard – a perforated aluminium sheet, this product is extremely robust, but still provides great visibility. It is corrosion resistant and cannot be cut.

Galvanised steel mesh – this is a heavy-duty mesh that provides better visibility than alugard, but it is more flexible, meaning it tends to bow and buckle within the frame and can rub on the glass and frames of the adjoining window/door. It can rust in high-moisture environments.

DVA one-way mesh – this is a heavy-duty mesh designed to reduce visibility into your home. However it also restricts air flow more than the other mesh options.

We can also fit **diamond grille** or other grilles to your windows to improve security.
